

USER MANUAL
100proGreen Master Lawn Slitter Adapter
for connection to Master Vario Drive Pro

1. Introduction of the Adapter

The adapter for the Master Lawn Slitter 88 is a mounting adapter designed for connecting the Master Lawn Slitter 88 machine to the Master Vario Drive Pro power unit. It serves as a structural intermediate component that enables a firm, precise, and safe mechanical connection between the two devices.

The adapter is designed exclusively for this specific combination of machines and replaces the original handle and transport parts of the Master Lawn Slitter 88. Without the use of this adapter, it is not possible to connect the Master Lawn Slitter 88 to the Master Vario Drive Pro power unit.

Using the adapter significantly facilitates handling of the machine during operation. Thanks to the connection to the power unit, the Master Lawn Slitter 88 does not need to be pushed or pulled manually, which reduces the physical effort required from the operator. This advantage applies both when maintaining large lawn areas and in smaller gardens, where the operator will appreciate greater working comfort and smoother machine guidance.

When properly installed, the adapter creates a stable connection without play and without any negative impact on the function of the blade cylinder. It thus enables safe and controlled operation of the entire assembly.

2. Installation and Commissioning

Always perform the installation of the adapter on a level, firm, and stable surface. Before starting the installation, make sure that the Master Lawn Slitter 88 machine is secured against movement and that the blade cylinder is not in contact with the floor or any other hard surface. Improper handling may lead to damage to the blades or bearings.

2.1 Machine Preparation

Place the Master Lawn Slitter 88 on a suitable surface so that it stands securely and there is no risk of it tipping over. Pay special attention to the position of the blade cylinder. If necessary, support the machine with suitable material, for example a wooden block, to protect the blade shaft during installation work.

2.2 Removal of Original Parts

To install the adapter, it is necessary to remove the original control and transport components of the Master Lawn Slitter 88.

First, remove the handle and the handle extension from the machine. Then remove the split transport roller, including the axle shaft.

2.3 Adapter Installation

Insert the adapter into the designated opening in the transport rollers after removing the axle shaft. Please make sure that both black spacer bushings are also installed and assemble the adapter together with the transport rollers into one complete unit according to the illustration. Ensure correct orientation of the adapter and that it is evenly seated in the frame without tension.

Secure the adapter using the two supplied mounting bolts. Tighten the bolts gradually and evenly to ensure a firm attachment of the adapter in the machine frame. Tighten with care to avoid damaging the threads or deforming the mounting points.

2.4 Connection of the Power Unit

After successful installation of the adapter, connect the Master Vario Drive Pro power unit. The connection must be made smoothly and without using excessive force. The power unit must fit onto the adapter precisely and without any play.

If the power unit cannot be connected or the connection is not smooth, check the position of the adapter in the machine frame and adjust it slightly if necessary. After adjustment, try the connection again.

2.5 Pre-Operation Check

After completing the installation and connecting the power unit, perform a check of the entire assembly. Verify that all mounting bolts are securely tightened, the adapter is firmly fixed, and the connection to the power unit is free of play.

Check that the blade cylinder rotates freely and does not come into contact with other parts of the machine. After a successful check, the assembly is ready for operation.

3. Safety Instructions and Storage

3.1 Safety Instructions

The adapter is предназначен exclusively for connecting the Master Lawn Slitter 88 machine to the Master Vario Drive Pro power unit. The product must not be used for purposes other than those intended by the manufacturer. Any other use is considered improper and may result in damage to the machine, the power unit, or hazardous situations.

Before starting installation, removal, or handling of the adapter, always secure the machine against movement. When working near the blade cylinder, wear protective gloves, as the blades are sharp and there is a risk of injury.

The adapter is not subject to any modifications or alterations. Do not use non-original fastening elements or perform any structural changes. All installation work must be carried out only using the supplied or manufacturer-approved parts.

When connecting the power unit, do not use excessive force. If the unit cannot be connected smoothly, check the correct position of the adapter and repeat the connection. Operating with an incorrectly mounted adapter is prohibited.

3.2 Storage

Store the adapter in a dry and clean area, protected from moisture and weather conditions. Before storage, it is recommended to clean the adapter of dirt, soil residues, and grass.

During long-term storage, make sure that the adapter is not exposed to mechanical stress or deformation.

Before reuse after long-term storage, always check the condition of the adapter, especially the mounting points and contact surfaces, and ensure that they are not damaged or excessively worn.

4. Warranty

The adapter for the Master Lawn Slitter 88 is covered by a 24-month warranty from the date of purchase, provided it is used in accordance with this manual and for its intended purpose.

The warranty does not cover damage caused by improper use, unprofessional installation, mechanical damage, use of non-original parts, or structural modifications.

All service and repair work should be entrusted to an authorized service center or the manufacturer. The use of non-original spare parts may result in loss of warranty.
